

Day 3 - API Integration Report - **WAY MORE**

API integration process.

First I install sanity project in my next.js project file and then I make products.ts and category.ts file in sanity schema type file and then I make a folder name Script in this folder make a file name migrate.mjs the purpose of this file to fetch the data for the API and upload it on Sanity CMS after make this file run command **npm run migrate** this command run the migrate.mjs file the will fetch and upload to Sanity CMS

Fetch data from Sanity CMS :

Make a component folder in this folder create SanityData.tsx file to fetch data from Sanity and display it on the front-end
